📅 **Availability:** Full-time RA from Apr 2026 (6 months)

Education

Nanjing University of Aeronautics and Astronautics

2019.09–2023.06

B.Eng. in Software Engineering (GPA: 4.0 / 5.0)

Nanjing, China

Nanjing University of Aeronautics and Astronautics

2023.09–2026.04

M.Eng. in Computer Science (GPA: 4.4 / 5.0)

Nanjing, China

Research

3D Gaussian Splatting Optimization & Artifact Removal

2024.09–2025.08

Low-Frequency First: Eliminating Floating Artifacts in 3DGS

Best Paper Honorable Mention @ CW2025

- **Problem:** Identified floating artifacts as a key limitation in 3DGS-based editing/reconstruction tasks.
- **Method:** Proposed a frequency-domain analysis framework to pinpoint artifact causes; developed EFA-GS, a lightweight optimization strategy requiring no additional computational overhead.
- **Result:** Effectively eliminated artifacts across multiple 3DGS variants; code open-sourced (**20+ GitHub stars**); 2 citations on arXiv since Aug 2025.
- **Status:** Submitted to ACM MM 2025 (Score: 5.75/10); awarded Best Paper Honorable Mention @ CyberWorlds 2025; currently under review at *The Visual Computer* (Journal, recommended by CW committee).

Diffusion Models for Generalized Zero-Shot Learning

2023.09–2024.08

Frequency-Aware Diffusion for GZSL

Under Review @ Machine Intelligence Research

- **Problem:** Diffusion models historically underperform on Generalized Zero-Shot Learning (GZSL) due to inherent frequency bias; limited prior work in this direction.
- **Method:** Analyzed frequency-domain behavior of diffusion sampling; proposed targeted improvements to both sampling algorithm and network architecture.
- **Result:** Achieved **10% performance gain** on standard GZSL benchmarks.
- **Status:** Currently under major revision at *Machine Intelligence Research*; Chinese invention patent filed (No. 202512020541.1).

Projects

Classifier-Free Guidance Diffusion Implementation

2022.12–2023.06

PyTorch reproduction of classifier-free sampling

200+ GitHub stars

- Reproduced the classifier-free guidance method from scratch; Code adopted by 5+ subsequent projects.
- Repository: <https://github.com/jcwang-gh/classifier-free-diffusion-guidance-pytorch>

Label-Noise-Robust Data Augmentation for Multi-Label Detection

2022.05

Chinese Invention Patent Granted

No. ZL202210149500.6

- Developed a data augmentation technique robust to label noise; patent granted in 2022.

Technical Skills

Languages: Python, C/C++, Shell Script, LaTeX

Frameworks: PyTorch, Git, Linux (Ubuntu/Arch), Docker

Research Areas: 3D Gaussian Splatting, NeRF, Diffusion Models, Generative Models, VGGT

Classical ML: SVM, Random Forest, AdaBoost, K-means

Engineering: Multi-GPU training

English: CET-6: 583; TOEFL: 84(2019)

Achievements

- Open Source Contribution Award, NUAA & OpenAtom, 2025
- Best Paper Honorable Mention, CW, 2025
- Second Prize, Lanqiao Cup National Software and Information Technology Professionals Competition (Jiangsu Provincial Division, C++ Category – Group A), 2021 & 2022
- Multiple Undergraduate/Graduate Academic Scholarships (First to Third Class), NUAA, 2019–2023
